

Beskrivning av gruvkarta (säkringsmaterial) för åren 2012-2013.

Lagringsmedia:

DVD

Samtliga horisontalblad och tvärprofiler är lagrade som pdf-filer och kan läsas med hjälp av dataprogrammet Adobe Reader.

Omfattning:

Gruvkartan omfattar horisontalblad för brytningsområdena Burkland 250- 1300m, Lindängen 150- 250m i Knallagruvan, Cecila, Sävsjön, Borta Bakom och Mellanby.

För Nygruvan omfattar gruvkartan horisontalblad för brytningsområdena 450-1300m, västra delarna av Nygruvan 435 – 650m. (8:an – 10:an), CDF samt östra delen (98:an) av Nygruvan 300 m.

Gruvkartan omfattar också dagblad som täcker aktuella brytningsområden under jord.

Horisontalbladen är kompletta beträffande inmätta konturer, tak- och sulhöjder men i de äldre utbrutna brytningsområdena saknas i stor utsträckning geologiska karteringar.

I aktuella brytningsområden samt brytningsområden avslutade efter år 2000 finns även geologiska karteringar redovisade i den utsträckning detta karterats.

Tvärprofiler redovisas för Burklandsområdet mellan 250 m avv. och 1300 m avv. med 40 meters mellanrum mellan 6640 X och 8720 X i gruvans koordinatsystem. Geologiska karteringar saknas dock på vissa blad.

Tvärprofiler redovisas för Nygruvan mellan 650 m avv. och 1030 m avv. med 40 meters mellanrum mellan 1880 Y och 3680 Y i gruvans koordinatsystem. Geologiska karteringar saknas dock på vissa blad.

Schematiska längdprojektioner för Nygruvan resp. Burkland finns redovisade.

Bladnumreringen under jord är anpassad till gruvans utsträckning för respektive brytningsområde.

Säkringsmaterialet innehåller också aktuella arbetsfiler i MicroStation dgn-format, databasfiler för stompunkter, bergschakt, ventilation och media. Såväl dgn-filerna som databasfilerna bedöms vara av stort värde för Zinkgruvan Mining AB vid ett eventuellt återskapande av den digitala gruvkartan.

Zinkgruvan 2014-02-25
